To find duplicate records in a SQL table, the standard and most efficient approach is to use the `GROUP BY` clause combined with the `HAVING` clause to filter groups that appear more than once. GeeksforGeeks +1

1. Find Duplicate Values and Their Counts

If you want to see which specific column values are duplicated and how many times they appear, use this query: Stack Overflow +1

sql

```sql
SELECT
    your_table_name
GROUP BY
    column_name
HAVING
    COUNT(*) > 1;
```

Utilisez le code avec précaution.

2. Find Duplicates Based on Multiple Columns

If a duplicate is defined by a combination of multiple fields (e.g., finding identical first and last names), include all relevant columns in both the `SELECT` and `GROUP BY` statements: Stack Overflow +1

sql

```sql
SELECT
    first_name,
    last_name,
    COUNT(*) AS occurrence_count
```

```
FROM
    users
GROUP BY
    first_name,
    last_name
HAVING
    COUNT(*) > 1;
```

Utilisez le code avec précaution.

3. Reveal the Complete Rows for Every Duplicate

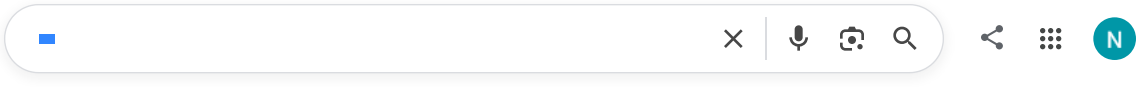
The basic `GROUP BY` query only reveals the grouped columns. If you need to view **every individual column** (such as unique IDs or timestamps) for all duplicate records, you can inner join the table back onto your duplicate list: Stack Overflow +1

sql

```
SELECT
    t1.*
FROM
    your_table_name t1
INNER JOIN (
    SELECT
        column_name
    FROM
        your_table_name
    GROUP BY
        column_name
    HAVING
        COUNT(*) > 1
) t2 ON t1.column_name = t2.column_name;
```

Utilisez le code avec précaution.

4. Alternative: Using Window Functions (Advanced)



sql

```
WITH DuplicateCTE AS (
    SELECT
        *,
        ROW_NUMBER() OVER (
            PARTITION BY column_name
            ORDER BY unique_id_column
        ) AS row_num
    FROM
        your_table_name
)
SELECT *
FROM DuplicateCTE
WHERE row_num > 1;
```

Utilisez le code avec précaution.

Note: Any record returning a `row_num` *of 2 or higher is a duplicate copy.* YouTube · Learn SSIS +1

If you are planning to take further action on these records, please tell me:

- Do you need to **delete the duplicate entries** while keeping exactly one copy?
- What **database system** are you using (e.g., MySQL, PostgreSQL, SQL Server, Oracle)?
